PR KADECO: PERFECTION IN THE DETAILS

ZIP awnings emphasize the modern and timeless building architecture in a unique way through optimal integration into the building structure itself. With the large selection of different colours in screen quality, the highest possible visibility to the outside is maintained while providing protection from the sun. Apart from the excellent glare protection, this also ensures a cooler temperature in the room.

We have optimized our ZIP vertical awnings in design, functionality and installation, down to the very last detail. Our program consists of five box sizes with angular and semicircular shape, so that maximum widths of 6m and maximum system heights of 5m can be achieved. With the different installation versions, modern sun protection is possible in almost all installation situations.

A WIDE RANGE OF INSTALLATION OPTIONS

With the new side guides, the front covers are screwed in place and can easily be opened and closed again as required, without causing any damage, like scratches, to the product. In addition, you can use special guide rails for console mounting which are attached without extra drilling. To complete the program, there is also a new double guide rail which is suitable for all types of mounting.
